```
This is a mouse patched (ptc) protein. The encoding DNA can be used to construct an expression cassette comprising an altered patch or hedgehog construct an expression cassette comprises a nucleic acid encoding a patched protein other than a Drosophila melanogaster patched protein, or fragment of at least 12 nucleotides in length, as other than an intact chromosome under transcriptional control of a transcriptional in an expression control of a transcriptional termination region, both functional in an expression cassette as an extrachromosomal element or integrated into the genome of the cell can be predisposed to develop basal cell carcinoma as a result of the transfection. By analysing nRA, functional analysis of patched protein, a genetic predisposition to develop binding to abnormal patched cancer can be diagnosed. This analysis can also be used for characterising the phenotype of a tumour, particularly a carcinoma, especially a basal cell carcinoma. The methods can also be used for characterising the phenotype of a tumour, particularly a carcinoma, especially a basal cell carcinoma. The methods can also be used for characterising the phenotype of a tumour, particularly a carcinoma, especially a basal cell carcinoma. The methods can also be used for characterising the nonorgeness, signal transduction, etc. Transgenic animal condels created from these cells can be used as animal models for carcinomas of the skin. The patched protein of human or mouse beetle or alternatively, a mammalian patched protein of human or mouse
                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Patched protein other than Drosophila melanogaster patched protein - used for characterising the phenotype of a tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 tumour suppressor; cell adhesion promoter;
agonists and antagonists, to isolate its ligand, partic. Sonic hedgehog, to assay for the transcription of ptc mRNA and to raise antibodies

The present sequence represents the mouse patched (ptc) protein. Cells containing and expressing the ptc gene are used for the recombinant production of the protein. These in turn are useful: (i) for generating antibodies (Ab); and (ii) to screen for specific-binding ligands cantibodies (Ab); and (ii) to screen for specific-binding ligands (potential therapeutic agonists and antagonists). The ptc gene, or its fragments, are used to isolate related sequences from other mammals; to identify mutations (particularly those associated with genetic diseases such as spina bifida and other developmental disorders); to monitor expression lavels in testis (to determine relationship with sperm production) and to isolate 5'-non-coding sequences (used to study embryonic development and to provide regulated expression of proteins). The complete gene can be used in gene therapy, including expression of antisense molecules, and to generate transgenic animals for studies of embryonic development. Ab are used diagnostically to determine the ptc protein on cell surfaces and as competitive inhibitors of signal transduction through the ptc ligand. Cells that have been engineered to express the ptc protein can be used to promote regrowth and healing of damaged tissue (e.g. growth of new teeth) and regulation of the ptc protein expression may be useful in cancer treatment (it may control the Wnt-1 oncogene)
                                                                                                                                                                ·;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nucleic acid encoding vertebrate patched protein and related transformants - used to express poly:peptide(s), useful for diagnosis and treatment of developmental disorders or cancer, and in healing of injured
      or
can be used to identify ligands or substrates that bind to, modulate, o mimic the action of patched gene. These agents could be used as tumour suppressors, cell adhesion promoters (e.g. in wound healing and ageing)
                                                                                                                                                                  Gaps

gene are characteristic in beams cell nevus syndrome (BCNS), an inherited disorder with an increased risk of developmental disorders such as spina bifida and craniofacial abnormalities, beams cell carcinoma of the skin and brain tumours. The human and mouse ptc sequences show 86% homology. The transgenic mouse of the invention has a genome comprising a disruption of at least one allele of a patched locus, where the transgenic mouse is useful for studying patched function and regulation, for e.g. a series of small deletions and/or substitutions made in the patched gene, to determine the role of different exons in oncogenesis, signal transduction, etc.; and for drug screening which is useful for treating cancer or developmental abnormalities attributed to a defect in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Transgenic mouse, useful for cancer drug screening, comprises disruption of allele of patched locus which predisposes the mouse to develop a proliferative disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence shows mouse patched (ptc) protein. Mutations in the patched

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides a monoclonal antibody which specifically binds to a patched protein (PTC) other than that from Drosophila. Also given are the protein and coding sequences of patched from the beetle, mouse, butterfly, fruit fly, mosquito and human. Patched is a segment polarity gene involved in limb patterning. The sequences can be used to study development and to isolate the patched ligand, hedgehog. In addition, antibodies can be used to detect the PTC protein on cell surfaces or to inhibit the transduction of signal by the PTC ligand by competing for its binding site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel monoclonal antibody useful in diagnostic assays for detection of presence of protein on surface of cells specifically binds to naturally occurring patched protein, other than Drosophila patched protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches
The invention relates to a DNA sequence other than present in chromosome encoding a patched (ptc) gene other than Drosophila patched gene. A cell expressing the DNA sequence is useful for producing patched protein, by growing the cell expressing the DNA sequence, where the patched protein, by growing the cell expressing the DNA sequence, where the patched protein. It is expressed and isolating the patched protein free of other proteins. Combining the compounds for binding affinity to the patched protein, by combining the candidate protein with the cell expressing the DNA sequence comprises the entire coding sequence under the transcriptional regulation of the transcriptional initiation region and transcriptional termination region functional in the cell, expressing the patched protein in the cell and assaying for the binding of the candidate compound to the patched protein. The above cell is useful for screening candidate compounds for agonist activity with the patched protein. The producing all or portions of the patched protein. The protein, as probes for research, diagnosis, binding of hedgebog protein in the cell is useful for producing all or portions of the patched protein. The protein, as probes for research, diagnosis, binding of hedgebog protein for the patched protein and in gene therapy. The DNA sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New DNA sequence other than present in a chromosome encoding patched gene other than Drosophila patched gene, useful for preparing transgenic laboratory animals and to knock out patched protein in embryonic stem
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       is also useful as primers for investigating other species and for isolating genes from various mammalian sources of interest, particularly from humans or from domestic animals. The DNA sequence is further useful for preparing transgenic laboratory animals and to knock out the PTC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                protein in the embryonic stem cells, so as to produce hosts with single functional patched gene. The present sequence represents the amino acid sequence of the mouse patched gene PTC product
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

The invention relates to an assay for phenotyping the patched status of a cell, involving detecting in vitro, in a sample of mammalian cells, the presence or absence of a genetic lesion in a patched gene (ptc) characterised by at least one of an aberrant modification or mutation of characterised by at least one of an aberrant modification or mutation of a patched gene or mis-expression of the patched gene. The invention also call developmental abnormality or proliferative disorder, where the developmental abnormality or proliferative disorder, where the cherry or activity of a patched gene or gene product, involving detecting in vitro the presence of a predisposing mutation in cells of the animal. Characterising the phenotype of a tumour, involves detecting the presence of an oncogenic mutation in cells of the tumour, where the presence of the oncogenic mutation in cells of the tumour, where the presence of the concogenic mutation in cells of the tumour was a patched associated phenotype. The assay is useful for phenotyping the patched associated phenotype. The assay is useful for phenotyping the patched status of the cell in a mammalian cell sample obtained from a human patient. The disorders that can be meninglomes and tibromas. This sequence represents a murine ptc

The invention describes an assay for phenotyping the patched status of a cell comprising detecting in a sample of mammalian cells the presence or absence of a genetic lesion having aberrant modification or mutation of a patched gene or mis-expression of the patched gene. The assay is useful for diagnosing a genetic predisposition of an animal, e.g. basal cell nevues syndrome, predisposition for developing tumour, i.e. carcinoma, meningioma, medulloma, or fibroma. A genetic construct encoding a patched polypeptide is used to treat an animal having a disorder comprising loss of function of a wild-type patched gene, such as cancer, and can enhance batch function in e.g. wound healing and aging. This sequence is encoded by the mouse patched gene.
                                                                                                                                                                                                                                                                                                                                                                                             Phenotyping the patched status of a cell for diagnosing a genetic predisposition for a tumor comprises detecting the presence or absence of a genetic lesion having aberrant modification, mutation or mis-expression of the patched gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Patched gene, PTC protein, embryo development; cellular regulation; signal transduction; ligand; antibody; hedgehog protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New DNA sequences encoding patched protein from organisms including human and mouse are used to elucidate embryonic development and cellular regulation associated with patched signal transduction and identify
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to a DNA sequence encoding a patched (PTC) gene. The invention is used to elucidate embryonic development, cellular regulation associated with signal transduction by the patched gene, identify agonists and antagonists of that signal transduction, identify and isolate ligands of patched protein and assay for levels of transcription of the patched gene. The present sequence is the mouse

cassette as an extrachromosomal element or integrated into the genome of the cell can be predisposed to develop basal cell carcinoma as a result of the transfection. By analysing DNA, functional analysis of patched protein, a genetic predisposed to develop basal cell carcinoma as a result of the transfection. By analysis pay, functional analysis of patched protein, a genetic predisposition to developmental abnormal patched cancer can be diagnosed. This analysis can also be used for cancer can be diagnosed. This analysis can also be used for characterising the phenotype of a tumour, particularly a carcinoma, especially a basal cell carcinoma. The methods can also be used for characterising transitional cell carcinoma. The methods can also be used for cancer can be used to determine the role of different exons of the patched gene in oncogenesis, signal transduction, etc. Transgenic animal carcinomas of the skin. The patched protein of models created from these cells can be used so animal models for carcinomas of the skin. The patched protein of models can be used to identify ligands or substrates that bind to, modulate, or minic the action of patched gene. These agents could be used as tumour subpressors, cell adhesion promoters (e.g. in wound healing and ageing)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acid encoding vertebrate patched protein and related transformants - used to express poly:peptide(s), useful for diagnosis and treatment of developmental disorders or cancer, and in healing of injured
of at least 12 nucleotides in length, as other than an intact chromosome under transcriptional control of a transcriptional initiation region, and a transcriptional termination region, both functional in an expression host. A genetically engineered mammalian cell comprising this expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence represents the human patched (ptc) protein.                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                 Human patched protein (PTC) (AAR75375) was identified as the product of a CDNA clone (AAT14220) derived from human lung. It has 96% identity and 98% similarity to mouse PTC. PTC protein has been proposed as a receptor for hedgehog protein on the basis of genetic experiments in files. Human PTC protein can be obtd. in large amounts by expression of the cDNA clone in transformed host cells. It can be used to screen for agonists and antagonists, to isolate its ligand, partic. Sonic hedgehog, to assay for the transcription of ptc mRNA and to raise antibodies
                                                                                                                             DNA encoding patched protein other than Drosophila patched protein – used to produce antibodies which detect or inhibit patched protein ligand
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This is a human patched (ptc) protein. The encoding DNA can be used to construct an expression cassette comprising an altered patch or hedgehog gene. The expression cassette comprises a nucleic acid encoding a patched protein other than a Drosophila melanogaster patched protein, or fragment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Patched protein other than Drosophila melanogaster patched protein – used

production of the protein. These in turn are used. It for generating antibodies (Ab); and (ii) to screen for specific-binding ligands (potential therapeutic agonies and antagoniets). The ptc gene, or its fragments, are used to isolate related sequences from other mammals; to identify mutations (particularly those associated with genetic diseases such as spina bifida and other devolopmental disorders); to monitor expression levels in testis (to determine relationship with sperm production) and to isolate 5'-non-coding sequences (used to study embryonic development and to provide regulated expression of proteins). The complete gene can be used in gene therapy, including expression of antisense molecules, and to generate transgenic animals for studies of embryonic development. Ab are used diagnostically to determine the ptc protein on cell surfaces and as competitive inhibitors of signal transduction through the ptc ligand. Cells that have been engineered to express the ptc protein can be used to promote regrowth and healing of damaged tissue (e.g. growth of new teeth) and regulation of the ptc protein expression may be useful in cancer treatment (it may control the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention provides a monoclonal antibody which specifically binds to a patched protein (PTC) other than that from Drosophila. Also given are the protein and coding sequences of patched from the beetle, mouse, butterfly, fruit fly, mosquito and human. Patched is a segment polarity gene involved in limb patterning. The sequences can be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel monoclonal antibody useful in diagnostic assays for detection of presence of protein on surface of cells specifically binds to naturally occurring patched protein, other than Drosophila patched protein.

The invention relates to an isolated TRC8 (Translocation in Renal cancer from Chromosome 8) nucleic acid molecule, encoding a polypeptide comprising a sequence of 64 amino acids fully defined in the specification and comprising a sequence located in the 5' flanking region to the coding region of TRC8 and a sequence which occurs in certain sporadic renal cell carrinomas. The methods are useful for detecting the presence of the TRC8 gene in a biological sample, detecting alterations to the gene, such as a 3;2 human chromosomal translocation, and fused DNA containing the fused site of TRC8/FHIT. A nucleic acid probe is useful for detecting the 3;8 human chromosomal translocation, by contacting the nucleic acid probe with a biological sample to be tested, and determining whether the nucleic acid probe specifically hybridises to the TRC8FHIT or FHITTRC8 fusion DNA. This sequence represents a TRC8 related protein of
detection of tumors, comprises rearrangements in the t\,(3;8)\,(p14.2;q24.1) chromosomal translocation which occurs in renal and thyroid carcinomas.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Patched; ptc; basal cell nevus syndrome; BCNS; wound healing; developmental disorder; spina blitia; craniofacial abnormality; basal cell carcinoma; skin; brain tumour; transgenic; mouse; proliferation; oncogenesis; signal transduction; cancer; aging.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                                                                                                                                           셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                 The invention relates to an isolated sequence comprising a native human patched-2 (Ptch-2) polypeptide. The invention also relates to signalling and mediator molecules in the hedgelog edgelog (Hh) cascade which are involved in cell proliferation and differentiation. The isolated sequence is useful for the treatment of disorders which are linked to Hedgehog, especially besert hedgehog expression, such as testicular cancer. It may also be used as a hybridisation probe in a cDNA library to isolate Ptch-2 or Hedgehog protein signalling. The present sequence is human patched (Ptch) protein. Note: The sequence shown as SEQ ID NO: 4 in sequence listing of the specification is a fragment of the sequence shown as SEQ ID NO: 4 in fig 3 of the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     TRC8; Translocation in Renal cancer from Chromosome 8; fused DNA; 3,2; FHIT/TRC8 fusion DNA; sporadic renal cell carcinoma; TRC8/FHIT; TRC8FHIT; human chromosomal translocation.

This sequence shows human patched (ptc) protein. Human patched gene has been mapped to human chromosome band 9q22.3 and lies between two controlling between two polymorphic makers DS196 and DS287. Mutations in the patched gene are characteristic in basal cell nevus syndrome (BCNS), an inherited disorder characteristic in basal cell nevus syndrome (BCNS), an inherited disorder with an increased risk of developmental disorders such as spina bifida and craniofacial abnormalities, basal cell carcinoma of the skin and brain tumours. The human and mouse ptc sequences show 86% homology. The transgenic mouse of the invention has a genome comprising a disruption of at least one allele of a patched locus, where the disruption predisposes the mouse to develop a proliferative disorder. The transgenic mouse is useful for studying patched functions and en regulation, for e.g. a series of small deletions and/or substitutions made in the patched gene, to determine the role of different exons in oncogenesis, signal transduction, etc; and for drug screening which is useful for treating transduction, etc; and for drug screening which is useful for treating function such as wound healing and aging
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New DNA sequence other than present in a chromosome encoding patched gene other than Drosophila patched gene, useful for preparing transgenic laboratory animals and to knock out patched protein in embryonic stem
                  iful for cancer drug screening, comprises disruption locus which predisposes the mouse to develop a

CC The invention relates to a DNA sequence other than present in chromosome encoding a patched (ptc) gene other than Drosophila patched gene. A cell expressing the DNA sequence; where the patched protein, by growing the cell expressing the DNA sequence; where the patched protein is expressed and isolating the DNA sequence; where the patched protein is expressed and isolating the DNA sequence; where the patched protein. By candidate compounds for binding affinity to the patched protein, by combining the candidate protein with the cell expressing the DNA sequence of candidate compounds for binding affinity to the patched protein, by combining the candidate protein with the cell expressing the DNA sequence of transcriptional initiation region and transcriptional termination region functional in the cell, expressing the compound to the patched protein. The above cell is useful for producing all or portions of the patched compounds for agonist activity with the patched protein. The above cell is useful for producing all or portions of the patched compounds for research, diagnosis, binding of hedgehog protein for its isolation and purification and in gene therapy. The DNA sequence is also useful as primers for investigating other species and for isolating genes from various mammalian sources of interest, particularly for proparing transgenic laboratory animals and to knock out the PTC protein in the embryonic stem cells, as as to produce hosts with single functional patched gene. The present sequence represents the amino acid sequence of the human patched gene PTC product
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

New composition comprising two or more isolated polypeptides, useful for

Disclosure, Page 8-10, 40pp, English

```
The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying a nucleotide sequence which is differentially expression of the polynucleotide sequence that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound useful in treating continuty in an animal of one or more of the polypeptides or their antibodies. The polynucleotide or the compound that oplypeptides or their antibodies. The polynucleotide or the compound to pain and a pharmaceutical composition comprising the one or more polynestides is activity is useful for preparing a medicament for treating conditions. The polynucleotide or the compound that in train (e.g. apinal segmental nerve injury (SNI)) in an animal (e.g. gene therapy). The sequence presented is a human protein (described in Table 3 therapy). The sequence date for this patent did not form part of the printed continuity in the printed continuity in the printed continuity in the sequence and a pharmaceutical nerve injury (SNI) in an animal (e.g. gene therapy). The sequence date for this patent did not form part of the printed continuity in the specification, which is differentially expressed during pain.
preparing a medicament for treating pain in an animal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ftp.wipo.int/pub/published_pct_sequences.

permease protein of branched-chain amino acid ABC transporter alr2538 [imported] - Nost C; Species: Nostoc sp. PCC 7120
C; Species: Nostoc sp. etcain PCC 7120 is a synonym of Anabaena sp. strain PCC 7120
C; Date: 14-Dec-2001 #sequence_revision 14-Dec-2001 #text_change 09-Jul-2004
C; Accession: AC2123

MDB is a malignant, invasive embryonal tumor of the cerebellum with a preferential manifestation in children. Although the majority of medulloblastomas occur sporadically, some manifest within familial cancer syndromes such as Turcot syndrome and basal cell nevus syndrome (Gorlin syndrome).
DISEASE: Defects in PTCH2 are a cause of sporadic basal cell. carcinoma (BCC) [MIM:605462].
SIMILARITY: Belongs to the patched family.
SIMILARITY: Contains 1 sterol-sensing (SSD) domain.

Submitted (OCT-2003) to the EMBL/GenBank/DDBJ databases.

--- FUNCTION: May have a role in epidermal development. May act as a

receptor for Sonic hedgehog (SHH).

--- SUBCELLULAR LOCATION: Integral membrane protein.

FEBS Lett. 410:485-489(1997).
-!- FUNCTION: May have a role in epidermal development. May act a
receptor for Sonic hedgehog (SHH).
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- TISSUE SPECIFICITY: Expressed in epithelial cells of the
developing hair, tooth and whisker.
-!- DEVELOPMENTAL STABE: Detected in 8.5 to 17.5 dpc embryos.
-!- SIMILARITY: Belongs to the patched family.
-!- SIMILARITY: Contains 1 sterol-sensing (SSD) domain.
                                                                                                                                                                                                                                                                                                         with Sonic

PTM: Glycosylation is necessary for SHH binding (By similarity).
SIMILARITY: Belongs to the patched family.
SIMILARITY: Contains 1 sterol-sensing (SSD) domain.
                                                                                                        Brachydanio rerio (Zebrafish) (Danio rerio).

Development 122:2835-2846(1996).

-!- FUNCTION: Acts as a receptor for sonic hedgehog (SHH), indian hedgehog (IHH) and desert hedgehog (DHH). Associates with the smoothened protein (SMO) to transduce the hedgehog's proteins signal (By similarity).

-!- SUBCELLULAR LOCATION: Integral membrane protein.

-!- TISSUE SPECIFICITY: Detected in embryonic presomitic mesoderm, neuroectoderm, tissue surrounding the notochord, ventral neural
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Extracellular (Potential).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Extracellular (Potential).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Extracellular (Potential).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Extracellular (Potential)

                                                                                                                           "Hedgehog and patched gene expression in adult ocular tissues.";
FEBS Lett. 410:485-489(1997).
-!- FUNCTION: May act as a receptor for sonic hedgehog (SHH).
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- TISSUE SPECIFICITY: In the eye, detected in neural retina, iris, retinal pigment epithelium, but not in lens.
-!- INDUCTION: Activated by hedgehog.
-!- INDUCTION: Activated by hedgehog.
-!- SIMILARITY: Belongs to the patched family.
-!- SIMILARITY: Contains 1 sterol-sensing (SSD) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                         -!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- DEVELOPMENTAL STAGE: Expressed at low level at 7 dpc, higher level
at 11 and 15 dpc, and persists at moderate levels at 17 dpc. In
the developing embryo, PTC is first detected within the ventral
neural tube and later in the somites and limb buds. Expression in
the limb buds is restricted to the posterior ectoderm surrounding
the zone of polarizing activity. In the adult, expression is seen
in brain, lung, liver, kidney and occular tissues; lower levels in
heart, skeletal muscle, and testis.
-!- FINDCTION: Activated by Sonic hedgehog.
-!- FTW: Glycosylation is necessary for SHH binding (By similarity).
-!- SIMILARITY: Belongs to the patched family.
-!- SIMILARITY: Contains 1 sterol-sensing (SSD) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This SWISS-PROT entry is copyright. "Biochemical evidence that patched is the Hedgehog receptor.";

Nature 384:176-179(1996).

-!- FUNCTION: Acts as a receptor for sonic hedgehog (SHH), indian hedgehog (IHH) and desert hedgehog (DHH). Associates with the smoothened protein (SMO) to transduce the hedgehog's proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Extracellular (Potential).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Extracellular (Potential)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         for tumorigenesis.
SUBCELLULAR LOCATION: Integral membrane protein.
SUBCELLULAR LOCATION: Inthe adult, expressed in brain, lung, liver, heart, placenta, skeletal muscle, pancreas and kidney. Expressed in tumor cells but not in normal skin.
DEVELOPMENTAL STAGE: In the embryo, found in all major target tissues of sonic hedgehog, such as the ventral neural tube,
                                                                                                                       germ-line mutations in the nevoid basal cell carcinoma syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              somites, and tissues surrounding the zone of polarizing activity of the limb bud.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        this protein is probably a necessary, if not sufficient step
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Aszterbaum M., Rothman A.L., Johnson R.L., Fisher M., Xie J., Bonifas J.M., Zhang X., Scott M.P., Epstein B.H. DISEASE: Defects in PTCH are probably the cause of basal cell nevus syndrome (BCNS) [MIM:109400]; also known as Gorlin syndrome or Gorlin-Goltz syndrome. BCNS is an aucosomal dominant disease characterized by nevoid basal cell carcinomas (NBCCS) and developmental abnormalities such as rib and craniofacial alterations, polydactyly, syndactyly, and spina bifida. In addition, the patients suffer from a multitude of tumors like basal cell carcinomas (BCC), fibromas of the ovaries and heart, crysts of the skin, jaws and mesentery, as well as medullobbastomas and meningiomas. PTCH is also mutated in squamous cell carcinoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TIGRFAMs; TIGR00918; 2A060602; 1.

            "SUBCELLULAR LOCATION: Integral membrane protein; highly concentrated in a punctate pattern at the apices and internal membranes adjacent to the rachis. Expression is more internse in the distal proliferative region and in oocytes of the gonad arm.
-!- TISSUE SPECIFICITY: Germ line and its progenitors.
-!- DEVELOPMENTAL STAGE: Expressed both maternally and zygotically.
-!- MISCELLANBOUS: Membrane proteins Patch and Smoothened form a receptor complex that binds Hedgehog morphogens. Despite the lack of Hh and Smo homologs, ptc-1 is still found to be functional. Absence of ptc-1 leads to the formation of multinucleate germ cells and sterility.
-!- SIMILARITY: Belongs to the patched family.
-!- SIMILARITY: Contains 1 sterol-sensing (SSD) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
